

## The First "Ingredient" in Our Aesthetic Medicine Formulations is Quality.

College Pharmacy's Aesthetic Medicine Formulas are created using premium pharmaceutical-grade active ingredients that have been carefully selected for their synergistic properties. Whether a topical cream, or a sterile injectable, all of our formulations are compounded under strict quality standards.

### The Result: Science-Based Formulations Tailored to the Unique Aesthetic Needs of Each Individual.

### Do I Need a Prescription For Skin Care?

Yes. Although many of the ingredients in our aesthetic skin creams may not seem like they "should" require a prescription, all compounded formulations legally require a prescription. We have the same strict quality control standards for our aesthetic medicine formulations as we do with any other prescription drugs that we compound...ensuring quality and potency.

### How Can I Get A Prescription?

The first step is getting a prescription from your healthcare practitioner. We will be happy to supply you and your practitioner with information about the requested formulation. We can also supply you with a practitioner referral. Once we receive a prescription, one of our customer service representatives will contact you directly to answer any questions you may have before we fill your prescription.

### Are Your Aesthetic Formulas Expensive?

Many people assume that our formulas are more expensive than commercial products available at department stores because our formulas are pharmaceutical-grade and require a prescription. This is not always true...especially compared to "designer skin creams" that are often marked up over 100% to be sold at retail stores. In addition, many of our aesthetic formulations contain a higher potency of active ingredients than are available in commercial products.

### The College Pharmacy Difference: *Quality. Innovation. Experience. Since 1974.*

As a comprehensive compounding pharmacy with over 35 years of industry leading experience, we understand that our customer relationships are our greatest asset. We are dedicated to providing high quality compounded formulations and customer service every day, every time.

OTC Product: Over-The-Counter Product. Does not require a prescription. Visit College Pharmacy's Online Store for additional OTC Aesthetic Medicine Products.

# Mesotherapy

## Body Sculpting & Cellulite Reduction

Mesotherapy is a medical technique, developed in France in 1952, that involves injecting microscopic quantities of natural extracts, homeopathic agents, pharmaceuticals and vitamins into the mesodermal or middle layer of the skin. The dermis acts as a time-release dosing system, allowing very small amounts of medicine to be absorbed over an extended period of time.

Mesotherapy is used by Aesthetic Medicine Practitioners to eliminate cellulite, sculpt targeted areas of the body, treat aging and sagging skin, and rejuvenate the hands and neck. While still gaining in popularity in the U.S., Mesotherapy is widely practiced throughout Europe.

Mesotherapy solutions generally contain a base solution consisting of a local anesthetic and a vasodilatory pharmaceutical drug. Other medicines are added, depending on the condition being treated. For example, for cellulite, a vasodilator to increase blood flow, a stimulator of lymph drainage, and a lipolytic agent to break down fat tissue would be used.

Injection depths typically range from only 2 to 6 mm with extremely small needles. If the clinician pinches the skin prior to the injection, the patient may not even feel the needle sticks. The number of shots and length of treatment vary with the condition and are to be treated. Treatments may be given once per week, later extending to once every two weeks or once per month.

## Are You Interested in Mesotherapy?

It is important to work with a fully-licensed healthcare practitioner that is trained in the Mesotherapy technique. Contact us directly for a practitioner referral in your community.
